

# HOW TO USE

Water scale deposits are the major cause of heat transfer loss, which in turn increases energy costs and reduces equipment life. Here are some ways to use Rouster-Chem to remove scale and mineral buildup.

## Water Heater Sediment

Then remove the hose from the drain valve and connect the swivel hose connector from a stand pipe unit (see photo). Pour Rouster Chem 4:1 solution into top of stand pipe funnel and allow to sit in tank for 60 minutes. Then open gate valve to allow scale to flow out. Repeat until water is clean.

## Circulation Through Waterlines
